

Eyecup

Order-No.: 240061

The eyecup is certainly the most useful accessory for users who use the device tactically or for hunting. Even the simple eyecup prevents the leakage of stray light when the TILO is used as monocular. This means that the user remains unseen even in the dark for wildlife and humans.

The eyecup is simply attached to the receptacle.

Another positive side effect of the eyepiece is that it provides additional protection against the scratching of the eyepiece lens.

Suitable for all TILO devices.
